

IFS Part #91906

Bypass Kit, Kenworth Water Valve

The KW Water Valve Bypass Kit can be used on trucks that use a coolant water valve to regulate coolant flow to the bunk's heater core.

Many Kenworth trucks use a coolant water valve for bunk heat regulation. This valve is not required for all Kenworth applications, only those that control bunk heat using a water valve instead of a Blend Door.

The Kenworth Water valve bypass Kit includes:

1. Adjustable Water Valve with a built in bypass circuit
2. Hose clamps
3. Heater Hose
4. Hose Adapters
5. "Y" fittings
